TITLE : TRAVEL GUIDANCE DEVICE FOR VEHICLE

ABSTRACT : PURPOSE: To easily recognize information on the periphery of an intersection without spoiling the visibility of other information.

CONSTITUTION: As the vehicle approaches the intersection, a display changing means 18 changes the colors of a map displayed by a display means 12 and information except on the intersection and an onward path connecting with the intersection in other information into similar colors. In another way, the contrast is decreased. Then the information on the intersection and onward path becomes conspicuous. Consequently, the visibility is not spoiled since the information except on the intersection and onward path regarding the intersection is only changed into the similar colors or decreased in contrast.
